Care Instructions for your Timber Veneer Table

Timber veneer is a natural material and will vary in grain, colour and character. Over time, the timber may naturally develop subtle changes in tone and patina.

Wipe spills immediately with a clean, soft, dry or lightly damp cloth. Do not allow moisture to sit on the surface.

Use coasters, placemats and table protectors to help prevent marks, scratches, heat damage and moisture rings.

Avoid placing hot items directly on the tabletop. Always use a suitable heat-resistant mat or trivet.

Avoid prolonged contact with wet, damp or heavily coloured items, as these may cause staining or discolouration.

Do not use abrasive cloths, scourers, furniture polish, wax, oils or harsh chemical, acidic or alcohol-based cleaning products unless specifically recommended for the finish.

For routine cleaning, use a soft cloth lightly dampened with clean water and dry the surface immediately afterwards.

Do not saturate the tabletop or use excessive water when cleaning.

Protect the table from prolonged exposure to direct sunlight, which may cause natural timber and veneer to change colour over time.

Avoid placing the table directly beside heaters, fireplaces, air-conditioning vents or other sources of heat or significant temperature fluctuations.

Lift rather than drag objects across the tabletop to help prevent scratching or damage to the veneer.

Take care when placing sharp, rough or abrasive objects on the surface.

Maintain a stable indoor environment where possible, as significant changes in temperature and humidity can cause natural timber and veneer to expand, contract or develop minor movement over time.

DO

- Wipe spills immediately
- Use coasters, placemats and heat-resistant trivets.
- Clean with a soft, lightly damp cloth and dry immediately.
- Lift objects rather than dragging them across the surface.
- Protect the table from prolonged direct sunlight and excessive heat.

DONT

- Don't leave water, spills or damp items sitting on the surface.
- Don't place hot items directly on the tabletop.
- Don't use abrasive cleaners, scourers or harsh chemicals.
- Don't use furniture polish, wax or oils unless specifically recommended.
- Don't expose the table to significant or prolonged changes in temperature or humidity.
